ON THE COVER

Diaspora in Cochineal

Maestro Porfirio Gutierrez

There are real reasons for the need to migrate. In many cases this is done by a greater force such as poverty, war, and displacement of land through inflated real estate prices or to simply ensure one's survival, similar to the life of a monarch butterfly. These stories of diaspora are shared with many others who have lived experiences of migration, including Maestro Porfirio Gutierrez, and are embodied in this piece.

MISSION STATEMENT

Genetics in Medicine is a monthly journal committed to the timely publication of:

- Original reports which enhance the knowledge and practice of medical genetics
- Strategies and innovative approaches to the education of medical providers at all levels in the realm of genetics

As an official journal of the American College of Medical Genetics and Genomics (ACMG), the journal will:

- Provide a forum for discussion, debate and innovation concerning the changing and expanding role of medical genetics within the broader context of medicine
- Fulfill our responsibility to the College membership through the publication of guidelines, policy statements and other information that enhances the practice and understanding of medical genetics

Finally, as genetics becomes increasingly important in the wider medical arena, we will be an accessible and authoritative resource for the dissemination of medical genetic knowledge to providers outside of the genetics community through appropriate reviews, discussions, recommendations and guidelines.
