

# Genetics in Medicine

An Official Journal of the ACMG

*Genetics in Medicine* is an official journal of the American College of Medical Genetics and Genomics.

## SCOPE

The journal's mission is to enhance the knowledge, understanding, and practice of medical genetics and genomics through publications in clinical and laboratory genetics and genomics, including ethical, legal, and social issues as well as public health. As genetics and genomics continue to increase in importance and relevance in medical practice, the journal will be an accessible and authoritative resource for the dissemination of medical genetic knowledge to all medical providers through appropriate original research, reviews, commentaries, standards, and guidelines. *GIM* encourages research that combats racism, includes diverse populations and is written by authors from diverse and underrepresented backgrounds.

*GIM* does not publish case reports. Manuscripts reporting population level research carried out in predominantly or exclusively White populations will generally not be accepted without strong justification for lack of diversity in the population studied. The significance of articles reporting data and/or observations from a limited geographic region is evaluated in the context of whether they are generalizable across relevant populations or whether they might fill a knowledge gap in populations that are underrepresented in genetics research or that experience health disparities. Although Somatic Cancer Genetics is a focus, *GIM* discourages cancer genetics manuscripts with data limited to somatic and/or tumor genetics. Manuscripts with novel findings on non-germline genetics (for example, somatic (tumor) variation, CHIP (clonal hematopoiesis of indeterminate potential), somatic and constitutional mosaicism) that inform our understanding of germline risk may also be considered.

This journal is indexed in Biotechnology Citation Index, Current Contents (Life Sciences), EMBASE - the Excerpta Medica database, Elsevier BIOBASE (Current Awareness in Biological Sciences), ISI Alerting Services, Medline/*Index Medicus*, Science Citation Index, and SciSearch/SCI Expanded.
